

## Release Notes

Banamex Updates

# Enhancements & New Features

## 1. Banamex Adapter Utility Reference Updated

When AMQ is unreachable, Banamex transaction responses stood the possibility of being lost. The Banamex AdaptorUtility component has been modified to allow multiple configurations. If AMQ is unavailable, the request will be written directly to the database. The AdaptorUtility also has been updated to read from the queue first, looking for a response; if a response is not found, then it will read from the database.

### Enhancement & Improved Feature Details

TFS ID	Description
150790	Update Banamex's Adapter Utility Reference
