EVO Snap

Release Notes

CWS Updates

Enhancements & New Features

The .29R3 release includes many new capabilities for the EVO Snap* platform, as well as multiple smaller enhancements:

1. Account Updater Service Added to Platform

Front-End/Market: United States

Account Updater works to ensure that the card data on file is the most up to date and accurate by updating account information without the time-consuming task of reaching out to customers to manually update account information stored on file.

TFS ID	Description
144066	Account Updater (MasterCard/Visa/Discover) - US
156370	Added AMS Queue Encryption
156564	AMS Requests through CMS Endpoint

2. Merchants Restricted in Account Updater Upload File

Front-End/Market: United States

When a merchant uploads a file to the Account Updater service, the uploading merchant does not have to be enrolled in Account Updater, but merchants listed in the upload file must be enrolled. If a merchant is included in the file that is not enrolled, the unenrolled merchant will be skipped and the file will continue to be read. Merchants must also be under the same service key – if a merchant is not listed under the correct service key, that particular merchant will be skipped and the file will continue to be read.

TFS ID	Description
156079	Restrict Merchants in AU Upload File

3. Updated Handling of Encrypted PGPKey Password for XDT and AMS

<u>Front-End/Market</u>: United States

Additional authentication was added when the Account Management Service requested a PGPKey.

TFS ID	Description
156108	XDT and AMS: Handling encrypted PGPKey password

4. CBR Rule Requiring Domestic Postal Code Removed

<u>Front-End/Market</u>: All markets

The CBR rule AVSPostalCodeReq has been removed, as PostalCode is no longer required when processing AVS data.

TFS ID	Description
156378	Deactivate CBR Rule to require Domestic Postal Code

5. Resolved Slowness Issues with Loading Keys

<u>Front-End/Market</u>: United States

Slowness issues with loading keys have been fixed.

TFS ID	Description
156754	XDT: Fix slowness issues with loading keys – refactor logic

Resolved Issues

We addressed the following issues in the current release to ensure your experience is top notch!

TFS ID	Description
156139	EHS .29 – SignOn without content-type Response returns application/xml instead of application/json
156602	Saving 3DS Data to the Database

157053	EMV Utility: DE 48 SE 23 Device Type
