

Release Notes

EVO Dashboard, Controlled Release Version

EVO Dashboard

EVO Dashboard was designed based on merchant feedback and technical evaluations of existing EVO products. It was determined through these reviews that there was a great benefit for merchants to be able to conduct reporting and transaction management within the same system that contains the payment acceptance workflow. Thus, Dashboard was created to consolidate the Virtual Terminal and the reporting and transaction capabilities into a single, fast, scalable, and easy to use product for both mobile and web-based users.

Regions

- * United States (VT Lite users only)

New Features

Item Catalog

A catalog feature was added to this version of Dashboard. Merchants can add items to their catalog and then quickly add those items to invoices to send to their customers. This feature gives merchants the ability to quickly and easily create invoices using their catalog items, instead of having to manually add individual item details each time an invoice is created. Like many aspects of Dashboard functionality, the Catalog feature is permissions based and may or may not be available based on a merchant's role.
