

Release Notes

CWS Updates

Resolved Issues

We addressed the following issues in the current release to ensure your experience is top notch!

1. Visa Card on File Transactions Declining

An issue where Visa card on file transactions were being declined has been resolved. Updates were made to support existing card on file transactions that were initiated before a new requirement was instated, which states that the Visa Transaction Id must be passed on subsequent card on file transactions.

TFS ID	Description
182329	Visa COF Transactions Declining
182616	eService: Drop PurchasedTokenization value if set to False and incorrect data sent in by ISV

2. PIN Debit Reversals Not Properly Passing/Mapping Track2Data

An issue where EMV PIN Debit reversals were not passing and mapping Track2Data appropriately has been resolved. Track2Data is now being passed and mapped from EMV PIN Debit reversals, as required.

TFS ID	Description
182636	TenderData masking issue in Serialized CWS for BCP follow-ons that contain TenderData
182644	NGTrans: EMV PIN Debit Reversals are missing Track2Data

3. Error While Parsing EntityName

An issue processing 3-D Secure transactions was identified when the ACS URL contained an ampersand. Updates were made to allow for all valid ACS URLs.

TFS ID	Description
182585	Error While Parsing EntityName
