

# **Release Notes**

CWS Updates

### **Enhancements & New Features**

The .30R5 release include many new capabilities for the EVO Snap\* platform, as well as multiple smaller enhancements:

#### 1. Card on File Updates - Support Visa Transaction ID

<u>Front-End/Market</u>: Europe (eService)

Updates were made to support additional card on file requirements, where the Snap\* platform can now pass through the Visa Transaction ID that is received in a card on file transaction response.

TFS ID	Description
180928	COF Updates for VisaTxnId

#### 2. Error Handling for Account Updater Download Request

<u>Front-End/Market</u>: United States (NGTrans)

The error message that is shown when an uploader queries for a download file when there are no response files received in the day the request was sent has been updated to respond "File not ready".

TFS ID	Description
180643	Handle Error Response on Download Request when No Response Files of a Batch Have Been Received

### **Resolved Issues**

We addressed the following issues in the current .30R5 release to ensure your experience is top notch!

TFS ID	Description
178095	TPS Error Logged on Void for 3DS Indicator
178391	TPS: eService auto-reversals submitting multiple 0420 transactions

178700	ACH Credit cannot use PaymentAccountData Token
180699	Account Updater Batch and Response Matchups Don't Match Up
