

Release Notes

TRON Updates

Enhancements & New Features

1. Implementation of Payment Facilitator (AlternativeMerchantData) Support

Updates have been made to support the implementation of a Payment Facilitator for the TRON front-end.

A Payment Facilitator is a merchant aggregator processing transactions on a sub-merchant platform. The sub-merchants are boarded directly under the Payment Facilitator's master Merchant Id account. Alternative merchant data is the identifying information about the sub-merchant that will appear on buyers' credit/debit card statements to remind cardholders of the details of the purchase, give them a way to contact the merchant, and help reduce chargebacks. The purpose of this data is to override the merchant information stored by the host on a per transaction basis at the time of processing.

Please see the TRON Business Rules and Guidelines for more information.

TFS ID	Description
181806	Implement Payment Facilitator (AlternativeMerchantData) support

2. XID Field Requirement Removed for 3-D Secure Mastercard Transactions

The XID field is now optional for Mastercard transactions only.

TFS ID	Description
