Release Notes

CWS Updates

Enhancements & New Features

The .35R2 release was focused on enhancing support for 3-D Secure 2.0:

Exemptions and Out of Scope Transactions

Support was added for Exemptions and Out of Scope transactions where a Challenge is unlikely to be required, thus ensuring the highest rate of Frictionless transaction processing for Merchants. More details on Out of Scope transaction types and Exemption categories can be found under the relevant workflow pages on the [EVO Snap Doc Portal](#).

TFS ID	Description
206521	3DS 2.0: Out of Scope Transactions and Exemptions

Protocol Support

Due to the many roles in the Authentication workflow, Snap* has added logic to submit the highest mutually supported protocol in an Authentication request. This will guarantee the highest chance of a successful Authentication. Note that only the Full Flow and As a Service workflows support this feature. The current release supports the following protocols: 1.0, 2.1, and 2.2.

For more information on Protocol Support, please see the [Full Flow Integration Guide](#) or the [As a Service Integration Guide](#).

TFS ID	Description
206218	3DS 2.0 Protocols
205545	Browser Snap/Merchant Protocol 1.0 Support
206791	Browser Fallback to 1.0 - Issuer Support
205786	Fallback from 2.2 to 2.1

Follow-On Transaction Support

For Authorize and Capture and Authorize and Undo transaction workflows, Authentication only occurs on the Authorize part of the transaction. However, the 3-D Secure Authentication information returned on the Authorize response are required on the follow-on transaction requests, such as Capture, ReturnById, and Undo. Support was added to internally map Authentication data on the Response for those follow-on transactions.

TFS ID	Description
206546	3DS 2.0 Follow-On Transactions

Cards Not Enrolled in 3-D Secure 1.0 Prevented from Processing

Improvements were made to disallow cards not enrolled in 3-D Secure 1.0 from being processed. Now, transactions will be declined until the Merchant-defined 3-D Secure rules that apply to both 1.0 and 2.0 protocols are in place.

TFS ID	Description
207226	Disallow Cards Not Enrolled in 3DS 1.0 to be Processed

Resolved Issues

We addressed the following issues in the current release to ensure your experience is top notch!

TFS ID	Description
206199	TPS is calling SIS twice to get merchant profile
208374	3DS 1.0 resubmit transactions not working after .35R1 deployment
