150+ CURRENCIES ACROSS 50 MARKETS WORLDWIDE

Release Notes

eService Updates

Enhancements & New Features

Support Added for 3-D Secure 2.0

The eService front-end was updated to support 3-D Secure 2.0, which is a protocol developed to make online payments more secure through password authentication and cardholder verification. For more information about 3-D Secure 2.0, including the different workflows available to merchants and integration guides, please see the EVO Snap Doc Portal.

CBR Rule Update for TokenIndicator

A Digital Wallet transaction without 3DS Data will trigger a CBR rule which requires the TokenIndicator field if the TokenCardType is set to MasterCard or Maestro.
