150+ CURRENCIES ACROSS 50 MARKETS WORLDWIDE

Release Notes

CWS Updates

Enhancements & New Features

The .35R3 release was focused on enhancing support for 3-D Secure 2.0 in Europe:

Card on File for Non-Payment Transactions

There are multiple options for managing a card on file without processing a payment, depending on which 3-D Secure 2.0 workflow is used. Please see the relevant workflow page on the Snap* Documentation Portal for more information on managing a card on file without payment processing.

TFS ID	Description
205319	3DS 2.0: Card on File: Adding without Payment
206568	3DS 2.0: Card on File: Maintain Card without Payment
206699	3DS 2.0: Card on File: Merchant Verify
207499	3DS 2.0: Card on File: Merchant Failed Account Verification

Application-Based Frictionless Flow

Application-Based Frictionless processing is now supported for 3-D Secure 2.0. The Merchant Application retrieves and encrypts device information, then sends in a transaction request with new SDKInfo fields and other required 3-D Secure 2.0 fields set – the Application specific fields and other relevant documentation can be found on the Snap* Documentation Portal. This feature is supported for the Full Feature and As a Service workflows.

TFS ID	Description
206458	3DS 2.0: Application-Based: Frictionless Flow
207140	3DS 2.0: Application-Based: Challenge Flow

Resolved Issues

We addressed the following issues in the current release to ensure your experience is top notch!

TFS ID	Description
207764	PTLS TxnCode=Override is not being set on ReturnById transactions
209146	Card Type Not Set During Resubmit on 3D Secure Transaction
209743	GetAvailableUpdates returns 0 updates for device that should have an update.
210719	PaymentAccountDataToken is not currently allowed on Verify calls.
